| | | | How do soil microbial communities respond to global climate?<br>Working in a large, long term, well replicated grassland climate change experimental system in the Angelo Coastal Reserve, CA, we are studying how microbial communities respond to predicted changes in rainfall timing and abundance. Specific questions include: (i) do different rainfall patterns alter microbial community membership? (ii) do above ground changes in vegetation correlate with, and drive, changes in subsurface consortia? (iii) how do communities vary with seasons, as the result of the first rain after the dry season, and as the result of extreme weather events? | producing microbes in the animals' guts.<br><br>Research Review in Plant and Microbial Biology - **PLANTBI 292 007 (FALL 2023)** |
| | Berkeley Food Institute | RCNR | Jeanne Merrill, Executive Director<br><br>The Berkeley Food Institute seeks to transform food systems to expand access to healthy, affordable food and promote sustainable and equitable food production. We empower new leaders with capacities to cultivate diverse, just, resilient, and healthy food systems.<br><br>Current global food systems have achieved remarkable historical growth and expansion, yet increasingly fail on many fronts. We witness erosion of ecosystem and cultural diversity, decreased resilience in the face of emerging climate change, wasteful food and natural resources usage, persistent pollution, and myriad social injustices—including exploitation of food systems workers. We also watch millions of people go hungry while many others suffer from obesity. | 2 Days of Soil, Science and Solutions – Report on CalCAN biennial conference on climate change and California agriculture<br><br>Fostering Resilience and Health of Food Systems in the Face of Drought |

| | | | minded research and its application in the marketplace of commerce and ideas<br><br>We use the words “sustainable” and “sustainability” in the broadest sense to include social, environmental, and economic considerations. This allows us to explore a wide array of issues, while retaining the flexibility to focus resources and attention for maximum impact. Our current focus areas are human rights and business, sustainable innovation, and sustainable food. | |
| Devin | Coleman-Derr | RCNR - Plant and Microbial Biology, IGI | The laboratory investigates the effects of drought and other abiotic stresses on the microbiomes associated with *Sorghum bicolor* and other grass species. With the world population expected to reach 9 billion by 2050, it is estimated that the global food supply will need to increase by 70 percent to meet rapidly rising demand. Changes in the global climate may well compound this challenge, as predicted increases in environmental stresses, such as drought and high salinity, are expected to reduce crop productivity. | |
| Junko | Habu | L&S Social Sciences - Anthropology | Habu conducts research on human-environmental interaction, human rights, and the long-term sustainability of human cultures and societies in the past and present. Using the theoretical framework of historical ecology, the research focuses on the importance of food and subsistence diversity, social networks and local autonomy for understanding the resilience of socioeconomic systems. | Environmental Archeology ANTHRO 135B 001 - LEC 001 FALL 2023 |

| Peggy | Lemaux | RCNR - Plant and Microbial Biology | Lemaux's laboratory performs both basic and applied research focused primarily on cereal crops, like sorghum, wheat, rice and barley. The objectives of these studies are to better understand crop plants and to use that knowledge to improve their performance and quality. More recently efforts with colleagues have focused on bioenergy and climate change – especially in the versatile feedstock, sorghum. | Lemaux is working on a climate change **project** focused on carbon sequestration, funded through the Chan-Zuckerberg Initiative. Work will focus on editing Sorghum bicolor to improve photosynthetic efficiency and root biomass.<br><br>Lemaux is also working on a recently DOE funded Earthshot Energy Research Center project, led by Lawrence Livermore National Lab, that is focused on increasing photosynthetic efficiency and upregulating root exudates, studying how to anchor that increased carbon in the soil. |
| Isabel | Madzorera | Berkeley Food Institute | Faculty Director at the Berkeley Food Institute. Madzorera's research interests include global health, nutrition, diet quality, maternal and child health, food systems, and global climate change. | |
