	Office of Sustainability and Carbon Solutions	Campuswide	The Office of Sustainability serves as a leader for sustainability initiatives on campus. Established in 2008, the Office of Sustainability has motivated concern for environmental stewardship to actualized improvements. Because of our efforts via education, outreach, and committees focused on promoting awareness and engagement, sustainability principles now inform campus choices pertaining to building projects, water and energy savings, transportation, food offerings, supply purchasing, and more.	Berkeley Clean Energy Campus With target dates of 2028 for phase one and 2030 for phase two, Berkeley has a plan to replace their natural gas powered cogeneration plant with a new clean and green resilient energy system. This forward-thinking initiative will phase out fossil fuel use for powering, heating, and cooling campus. The new reproducible, scalable Berkeley Clean Energy Campus system will demonstrate state-of-the-art technologies and exemplify creative financing such that other campuses and public institutions can replicate Berkeley's model.
Rusen	Oktem	L&S Physical Sciences - Earth and Planetary Sciences	Developing and implementing image processing-based algorithms to collect data on atmospheric clouds. Collaborated with David Romps on new cloud data sets.	Berkeley Researchers Look to Clouds for Drought Clues — 4D Stereophotogrammetry leads to new data sets. Use stereo photogrammetry to collect data on atmospheric clouds. Analyze observation data to understand the cloud processes.

Justin	Remais	Public Health - Environmental Health Sciences	Chair of the Division of Environmental Health Sciences. His research examines how the transmission of environmental pathogens responds to rapid environmental change. His team advances methods for estimating the dynamics and spread of infectious diseases in changing environments, such as those associated with rapid urbanization, industrialization, changes in water resources, and an increasingly variable climate.	Projects: NIH R01 - Climate change and the epidemiology of Valley fever in California (2019-2026; \$4.2mil); NIH R01 - Climate change and the expansion of fungal diseases in the U.S. (2023-2028; \$3.9mil) PBHLTH 271G – Health Implications of Climate Change; PBHLTH 273 – Environment and Infectious Diseases SPRING 2022
Alan	Rhoades	LBNL	Climate change is the defining issue of my generation. Mountains (our natural water towers) are sentinels in how impacts from climate change are felt. As an early career global and regional climate modeler, I have a keen interest in understanding how mountainous water cycle processes are influenced by climate change, how those changes might influence water resource management, and how the scientific community might better help water managers preemptively adapt to these changes. My focus is primarily on the mountains of the western U.S. across long-term (hydroclimate) and short-term (hydrometeorological extremes) timescales.	EESA Study Predicts Larger, Wetter Atmospheric Rivers – Mountains Vulnerable to Extreme Rain from Climate Change Limiting Global Warming Now Can Preserve Valuable Freshwater Resource –
